Antenatal Testing Options

Cystic Fibrosis/Spinal Muscular Atrophy/Fragile X: These blood tests detect carriers of these genes that can cause severe genetic diseases. These tests are recommended to be offered to all pregnant patients. Screening can tell you whether you are at risk of having an affected baby but it cannot tell you with 100% certainty. If screening shows that both parents are carriers, the results cannot tell you how severe the disease may be. Cost: \$800-\$1200

Yes _____

No _____

Inheritest Carrier screening: This blood test screens the mother for over 100 of the most Common inherited genetic defects and can be done at any time before or during pregnancy. Cost: over \$2500
